

Top 10 Driving Tips

5 Auto Maintenance Tips

1. Schedule a vehicle maintenance check to ensure tires, wipers, and brakes are functioning properly.
2. Check tire pressures each month and don't forget the spare.
3. Top up on windshield wiper fluid and ensure the fluid nozzles and the wiper blades are in good working order.
4. If safe to do so, do your best to avoid potholes – they can damage tires and wheels and can potentially cause you to lose control. If you do need to pull over, be careful on gravel shoulders, as they can be softer than usual after the thaw.
5. Have an emergency kit in the car at all times as storms can strike at any moment.
